Overall prevalence of infection using microscopy was 40.1% in dogs and 33.9% in cats. Helminth infection found in both dogs and cats included hookworms, *Spirometra* spp., *Taenia* spp., *Toxocara* spp., *O. viverrini*, *Strongyloides* spp. and *Trichuris* spp. Hookworms were the most common helminth in dogs, while *Spirometra* spp. were the most prevalent in cats.

Abstract. Deals with the protozoa, helminths and arthropods transmissible between man and lower animals, emphasizing methods of surveillance, prevention, and control that can reduce the incidence of zoonoses and foodborne disease. Parasitic conditions covered include toxoplasmosis, sarcosporidiosis, leishmaniasis, African and American trypanosomiasis, malaria, Pneumocystis carinni infection, babesiosis, amebiasis, giardiasis and balantidiasis.

Parasitic helminths are animals that are often included within the study of microbiology because many species of these worms are identified by their microscopic eggs and larvae. There are two major groups of parasitic helminths: the roundworms (Nematoda) and flatworms (Platyhelminthes). Of the many species that exist in these groups, about half ...

Nowaday, zoonoses are an important cause of human parasitic diseases worldwide and a major threat to the socio-economic development, mainly in developing countries. Importantly, zoonotic helminths that affect human eyes (HIE) may cause blindness with severe socio-economic consequences to human communities.

Zoonotic hookworms are hookworms that live in animals but can be transmitted to humans. Dogs and cats can become infected with several hookworm species, including *Ancylostoma braziliense*, *A. caninum*, *A. ceylanicum*, and *Uncinaria stenocephala*. The eggs of these parasites are shed in the feces of infected animals and can end up in the environment, contaminating the ground where the animal defecated.

## *Parasites - Zoonotic Hookworm - CDC*

Zoonoses are diseases that can be spread from animals to humans under natural conditions. These diseases can include any type of organism, for example, viruses, bacteria, parasites, and prions. Zoonotic diseases may be spread directly from animals to people, or
