We end by considering several open questions about the contribution of the parietal lobe to episodic memory. Figure 1: Subdivisions and connectivity of the posterior parietal cortex. Figure 3 ...

The parietal cortex and episodic memory: an attentional account
Next came regions governing spatial orientation and language in the parietal lobes on the sides of the brain. The last area of the brain to reach maturity is the prefrontal cortex, where the so ...

Beyond the Brain
Third, brain regions that are typically associated with neglect and that are considered to have spatial functions, such as the parietal lobe ... spatially lateralized contributions to neglect.

Non-spatially lateralized mechanisms in hemispatial neglect
In the case of severe concomitant AD pathology, atrophy of the temporal and parietal regions is more evident. In contrast to AD, the general brain atrophy is less prominent in DLB along with the ...

Dementia with Lewy bodies - a clinicopathological update
The atrophic process involves the frontal, temporal and parietal lobes, and a widespread loss ... the cholinergic deficiency that results may contribute to the cognitive deficits observed in ...

Efficacy of FPF 1070 (Cerebrolysin) in Patients With Alzheimer's Disease
Brain. 2018;141(6):1592-1608. It has been difficult to determine if hippocampal hyperactivity is pathological or simply an indicator of a compensatory response for declining memory in patients ...
