Many distros (like Ubuntu/MX/LinuxMint...) provide feature for persistence. This allows saving any changes you make to the live system, so that they are still present the next time you boot to it. In normal case, we create a separate partition to do this which is not so flexible. Now Ventoy brings a new feature here.

Using system images is the simplest persistence strategy. Notebook hibernation is an example of orthogonal persistence using a system image because it does not require any actions by the programs running on the machine. An example of non-orthogonal persistence using a system image is a simple text editing program executing specific instructions to save an entire document to a file.
