PLCs in substation automation Reliability, a large installed base, extensive support resources and low costs are some of the benefits of using PLCs as a basis for substation automation and SCADA systems. PLCs are extremely reliable. They have been developed for application in harsh industrial environments.

controller) in substation for the purpose of automation. At the substation the power is managed between the generator set and the main incomer supply. In the power management, the control of low voltage and turn on the generator set automatically which is installed at the substation in case of low voltage and monitors all electrical parameters on PC by using SCADA is done. GSM-based Substation Automation Using PLC and SCADA Software: This project is a high-cost and more reliable project when compared to the microcontroller project that we have discussed above. The system here uses PLC (Programmable Logic Controller) as a Remote Terminal Unit (RTU) to control and take the inputs similar to the microcontroller of the above mentioned project.

The driving force for the PLC and PLC-based PAC market in automation is, as it is for several devices, the digitalization of the automation business. Call it Industrial Internet of Things (Industrial IoT) or Industry 4.0, most of the approaches arise from the consumer goods markets, e.g., multi-touch, cloud, or edge computing.

PLC can help in achieving complete automation e.g. an air conditioning system can be switched on before the owner reaches his home especially in summer. A PLC based security system will detect smoke, excessive electrical power usage, burglar attempts and unauthorized movements in the house and send alert messages.
