Practical Fiberoptic Bronchoscopy [EPUB]

Fiberoptic bronchoscopy is a procedure that allows a clinician to examine the airways by placing a thin tube-like instrument through the nose or mouth and down into the lungs. The tube sends pictures back to a video screen or camera. The procedure can be either diagnostic, to diagnose lung disease, or therapeutic to treat some lung conditions.

Atlas of Fiberoptic Bronchoscopy - Free Medical Books

Objective: Atropine premedication is widely used for fiberoptic bronchoscopy and may help by drying secretions, producing bronchodilatation, or preventing vasovagal reactions. The objective of this study was to see whether atropine premedication is really of practical benefit when patients are sedated with IV midazolam.
