Non-traumatic neck pain is always of concern, and the covert causes must be considered, including meningitis, spinal infection and metastatic deposits within the spine. In general, the following should be regarded as red flags in spontaneous neck pain: Presentation in patients less than 20 or over 55 years of age.

Non-Traumatic Neck Pain - RCEMLearning  
mri. Magnetic Resonance Imaging (MRI) Advanced imaging modality of choice in evaluation of low back pain. There is a paucity of evidence for the appropriate timing of MRI, but emergent MRI has been suggested for suspected cord compression, cauda equina syndrome, abscess or infection.

Diagnostic Imaging Pathways – Low Back Pain  
In the absence of progressive neurologic deficits or other red flags, there is strong evidence to avoid CT/MRI imaging in patients with non-specific low back pain. (6,7)

Imaging for Low Back Pain - AAFP Home  
Most patients with non-traumatic neck pain have either normal cervical spine radiographs or age-related degenerative changes that are often unrelated to symptoms 3,6-8; Plain radiography is not indicated for the investigation of non-traumatic neck pain unless "red flag" features suggestive of serious underlying disease are present or symptoms have persisted for more than 6 weeks 3,6,7,9

Diagnostic Imaging Pathways - Neck Pain (Non-Traumatic)  
Radiologists should give attention to the non-spinal findings in lumbar spine MRI, as the detected pathology could be the source of pain or could potential life-threatening conditions.
