Nuclear Pharmacy. In a nuclear pharmacy radiopharmaceuticals are prepared, stored, and dispensed primarily for human use, just as regular drugs are in a pharmacy. The nuclear pharmacy is staffed with trained personnel such as radiopharmacists and radiochemists, that is, chemists or pharmacists with special training in radiopharmaceutical chemistry. The nuclear pharmacy may serve as a center for education and training of pharmacy and nuclear medicine technology students and engage in basic ...

radiopharmaceuticals for the treatment of metastatic bone pain, neuroendocrine and other tumours. The prospect of localising or treating neoplastic diseases using specific antibodies labelled with radioactive isotopes capable of delivering large amounts of internally administered radiation may

### **Therapeutic applications of radiopharmaceuticals**

Nuclear pharmacy, also known as radiopharmacy, involves preparation of radioactive materials for patient administration that will be used to diagnose and treat specific diseases in nuclear medicine. It generally involves the practice of combining a radionuclide tracer with a pharmaceutical component that determines the biological localization in the patient. Radiopharmaceuticals are generally not designed to have a therapeutic effect themselves, but there is a risk to staff from radiation exposu

### **Nuclear pharmacy - Wikipedia**

Radiopharmaceuticals are special drugs that in the composition preserve one or more radionuclides which can be used as diagnostic or therapeutic tools in Nuclear Medicine Units. This study evaluated hospitals and clinics which have nuclear medicines services at the city of Rio de Janeiro from August to November 2010.
