Environmental science studies the environment and how the earth works. Environmental scientists often study how humans have impacted the Earth's environment and how we can reduce the impact that humans have on the environment. Environmental scientists study things like the atmosphere, the oceans, geology, habitats, and ecology. Nutrient Cycles The Earth's environment is constantly recycling nutrients so they can be used by different parts of the environment. These cycles are important for ...

School - we combine the natural, social and economic aspects of the environment, so you graduate as a well-rounded practising environmental scientist.

Environmental science -Griffith University Page 16/19

Science, technology, society and environment education, originates from the science technology and society movement in science education. This is an outlook on science education that emphasizes the teaching of scientific and technological developments in their cultural, economic, social and political contexts. In this view of science education, students are encouraged to engage in issues pertaining to the impact of science on everyday life and make responsible decisions about how to address such
