Review Seasonal climate forecasting

Seasonal predictions have to deal also with the challenge of initializing all the components of the climate system (ocean, sea ice, and land surface). The value of skilful seasonal forecasts is obvious for many societal sectors and is currently being included in the framework of developing climate services.

The atmospheric initial state for a seasonal forecast is generally provided from the atmospheric state created to initialize a weather forecast. So seasonal forecasting relies on weather forecasting in that sense. There is a much more important reliance on weather forecasting however, which involves the ocean and atmospheric reanalyses.

Overview of Seasonal Forecasting | SpringerLink

This article demonstrates how a science-based early warning informed decisions and saved lives by triggering action in anticipation of forecast events. It analyses what it took to move decision-makers to action, based on seasonal climate information, and to overcome traditional barriers to the uptake of seasonal climate information in the region, providing evidence that these barriers can be overcome.
