Sets, Logic and Categories (Springer Undergraduate ...

Set theory, logic and category theory lie at the foundations of mathematics, and have

a dramatic effect on the mathematics that we do, through the Axiom of Choice, Gödel's Theorem, and the Skolem Paradox.

Sets, Logic and Categories | SpringerLink
Thus almost all the objects of Mathematics can be described as sets: A natural number

is a set of sets (a cardinal), a rational number is a set of pairs (an equivalence class), a real number is a set of rationals (a Dedekind cut), and a function is a set of ordered pairs (a table of values).
