~~CV Physiology | Signal Transduction Mechanisms~~

Not only is the activation of β -ARs and their associated signaling transduction critical in understanding the physiology of the cardiovascular system, but it has been recognized over the past decades that

Get Free Signal Transduction In

β -AR activations also play key roles in cardiac disease processes such as heart failure . For example, an apparent paradox exists, namely, that β -adrenergic blockers (β -receptor antagonists) are beneficial in patients with heart failure; this will be discussed in more

and Ashok K.

Srivastava This book
has addressed the
contributions of

Get Free Signal Transduction In

several key signal transduction pathways

~~Signal Transduction in the Cardiovascular System in Health ...~~

The cardiovascular system is a complicated, ordered system in which signal transduction plays a key regulatory role in this system.

There are a series of

Get Free Signal Transduction In

specific receptors and complex intracellular mechanisms in the cells of the heart and blood vessel walls that allow cells to respond appropriately to external stimuli.

~~Cardiovascular and Signal Transduction Creative Diagnostics~~

There are several signal transduction

Get Free Signal Transduction In

The mechanisms that modulate intracellular calcium concentration and therefore the state of vascular tone.

Two different mechanisms will be described here: 1) G-protein-coupled pathway, and 2) the nitric oxide-cGMP pathway. G-Protein Coupled Signal Transduction

Signal transduction defects as a cause for reduced growth factor responsiveness

Growth factor action is physiologically followed by specific molecular and cellular responses. If growth factor activation is not followed by a proper cellular response or if it does not properly

Get Free Signal Transduction In

activate downstream signalling cascades, we can call this situation a "signal transduction defect".

~~Growth factor signal transduction defects in the ...~~

The signal transduction cascade of ischemic preconditioning can be divided into

Get Free Signal Transduction In

triggers and mediators. Triggers are important during the episode of preconditioning ischemia and reperfusion, and blockade of a trigger's action during this preconditioning phase will abolish its cardioprotective effects.

Get Free Signal Transduction In

~~Signal transduction of ischemic preconditioning ...~~

Several signal transduction systems, especially steroid receptors, utilise an interaction with Hsp90 as an essential component of the signalling pathway and a number of signalling molecules such as G protein ☐☐

Get Free Signal Transduction In

subunits and protein kinases, including Src and Raf components of the mitogen-activated protein kinase (MAP) cascade, are also bound to Hsp90 (for review see Ref.).
