The induction motor was simulated using several configurations of the SVM VSI. Analysis of PWM switching frequency and zero voltage vector placement was performed. Results were compared in the time and frequency domain.

Abstract: This paper presents the results obtained by the finite elements model co-simulation technique in the transient analysis of an electric drive for advanced traction applications. The case study refers to a 200kW induction motor drive designed for a premium electric vehicle in the frame of the Horizon 2020 “ReFreeDrive” project (Rare earth Free e-Drives featuring low cost manufacturing).

applied to the induction motor drive through simulations. Simulation result shows that if open loop configuration, the effect of change in V/f ratio improves speed regulation and there is no remarkable effect in closed loop configuration. Open loop V/f control technique is simple and easy to implement.

motor shown. Simulations of IRW and conventional wheelset are presented and validation of the results with data from a 1/5 scale test rig is carried out. 2. The Wheelset Models and Control Strategy Fig.1 shows the proposed IRW configuration. It can be seen that the induction motors can either be independently controlled by the inverters or jointly controlled by the inverters and the main computer. Fig. 1 ...

The three phase PWM inverter fed induction motor drive is simulated using the circuit model developed. The simulation and experimental results for single phase to three phase inverter system and three phase to three phase inverter system are presented. The frequency spectrum for these cases is also presented.

7.3 Modeling and Simulation of a Five-Phase Induction Motor Drive. A five-phase drive system consists of a five-phase AC machine, a five-phase power converter, and a controller based on microcontroller/digital signal processors/field programmable gate arrays that are controlled using a PC. The following section describes the modeling procedure of these components.

Simulate an AC Motor Drive To use the AC drive models of the Electric Drives library, you first specify the types of motors, converters, and controllers used in the six AC drive models of the library designated AC1 to AC6. The AC1, AC2, AC3, and AC4 models are based on the three-phase induction motor.

In this project the variable speed drive aims at making speed of an induction motor variable through varying the frequency and hence torque of induction motor. Planning starts at creating a simulink model of an induction motor connected to a variable speed drive. Simulation is then done for various parameters and results tabulated in graphical form.
