Smart textiles for designers: inventing the future of ...

Electronic textiles or e-textiles are fabrics that enable digital components such as a battery and a light, and electronics to be embedded in them. "Smart textiles" are fabrics that have been developed with new technologies that provide added value to the wearer. Pailes-Friedman of the Pratt Institute states that "what makes smart fabrics revolutionary is that they have the ability to do many things that traditional fabrics cannot, including communicate, transform, conduct energy and even grow".
