## SURGICAL TECHNIQUE - Shoulder Innovations

Diagnostic arthroscopy of the shoulder requires an efficient and reproducible technique. In this Technical Note, we describe a step-wise approach to diagnostic arthroscopy of the shoulder. This technique is performed using a posterior viewing portal. It can be performed from the beach chair or the lateral decubitus position.

## 14 Anatomical

Shoulder Domelock® System Surgical Technique. Begin insertion of the reamer just under the highest point of the resection, directly medial to the bicipital tendon (Fig. 15), in line with the shaft axis. For this purpose, the arm is externally rotated and extended, with the elbow resting on the body.

colour code guidance, the surgeon should resect 1 - 2 mm of the proximal area of the greater tuberosity (at the level of the supraspinatus insertion in an intact shoulder).

## Surgical Technique

Surgilig AC Ligament. ' Surgilig ' was developed by the Nottingham Shoulder Unit and was first introduced in November 2001 as a method of addressing failed ACJ surgery but has gained popularity in the last three years as a primary method of stabilizing the disrupted ACJ. This artificial ligament provides a strong, flexible and permanent solution to AC Joint dislocations, with few complications to date.

and extending inferiorly. The deltopectoral interval is located and the cephalic vein is identified. Deltoid and the cephalic vein are retracted laterally.

## Latarjet - French Technique | ShoulderDoc

The modern technique of interscalenic block was introduced by Winnie in 1970 and soon became the standard for anaesthesia and postoperative pain management of shoulder surgery.

Requested surgical positioning (beach chair position) must be accurately followed by the anaesthetic staff to avoid hypotension and consequent brain hypoperfusion.
