Inside a Child's Mind –  
Research Findings from  
Psychological Science.  
Developmental psychology  
researchers have long known  
that children aren't simply  
mini-adults – their minds  
and brains work in  
fundamentally different  
ways. Exploring those  
differences can help us  
understand how kids think  
and behave and can provide  
insights into how the mind  
and brain develop and change

Review: Children's Minds -  
Thinking

First published in 1978,  
'Children's Minds' has  
become a classic inquire  
into the nature of human  
thought. Margaret Donaldson  
shows how thought and  
language originally depend  
upon the interpersonal  
contexts within which they  
develop, and how, given the  
support of such contexts,  
children are already skilled  
thinkers and language users  
by the time they come to  
school.

## Minds On Entering School

Children have the capacity to embellish stories, add a few flying ponies or talking butterflies to them, but they do not all have the capacity to lie, be conniving, or create problems. However, at, approximately, age five, most kids learn how to lie, so they won't always be innocent. Therefore, if a child, for instance, mentions that his grandma doesn't like someone, you might want to question the validity of the statement.
