In materials science, creep (sometimes called cold flow) is the Page 14/50

tendency of a en solid material to move slowly Seldefor Factors permanently And under the influence of persistent mechanicalesign stresses. It can occur as a result of longterm exposure to high levels of Page 15/50

stress that are still below the yield strength of the material Creep is more severe in materials that are subjected to heat for long on periods and generally increases as they near their melting point. Page 16/50
