The Food Chemistry Laboratory illustrates chemical and physical properties and behavior of food constituents and additives. It is filled with guides and experiments, and its unique design allows you to structure individualized laboratories. Directions for independent research in food chemistry are also included.

In The Food Lab, Kenji focuses on the science behind beloved American dishes, delving into the interactions between heat, energy, and molecules that create great food. Kenji shows that often, conventional methods don't work that well, and home cooks can achieve far better results using new-but simple-techniques.

With extensive knowledge and understanding of all aspects of food chemistry and biochemistry, Campden BRI is ideally placed to help you with whatever issues you face, from demonstrating that the food is what it says it is, through understanding nutrient content and the components that make it taste good - or bad - to detecting natural toxins and allergens and contaminants, such as pesticides and packaging migrants.

Food chemistry and biochemistry at Campden BRI

Food chemistry is the study of chemical processes and interactions of all biological and non-biological components of foods. The biological substances include such items as meat, poultry, lettuce, beer, and milk as examples.
