The theory argues that the inflationary phase of the Universe goes on forever; it didn't end for the Universe as a whole. In other words, the cosmic inflation continues in some parts of the Universe and ceases in the others. This leads to a multiverse scenario, wherein space is broken into bubbles. It's like a universe inside a universe. In a multiverse, different universes may have ...

Amanda Gefter wrote an article discussing multiverse theory, or the idea that our universe may be only one of many that currently exist. Such speculations attempt to explain away the appearance of design in the universe, because of, as we shall see, the spiritual implications. In an article called What's God got to do with it she wrote:
