The evolution of ontogenescence is deeply tied to that of reproductive strategies, menopause, sociality, senescence, transcription patterns and the ontogenetic programme. Studying ontogenescence requires far less time than studying senescence; the next few years may finally elucidate the clear special reasons why young organisms are so prone to die.

Before senescence: the evolutionary demography of ontogenesis

The Unicist Theory of Evolution of Peter Belohlavek was a theory developed to deal with the adaptive aspects of reality. Its purpose was not to find the origin of species. It was the finding of the laws of evolution in order to predict human adaptive systems to influence them.
