Shells are actually special applications that use the kernel API in just the same way as it is used by other application programs. A shell manages the user–system interaction by prompting users for input, interpreting their input, and then handling an output from the underlying operating system (much like a read–eval–print loop, REPL).

Shell (computing) - Wikipedia  
The average impact energy of palm kernel shell is 2.066 J/cm 2 and 1.894 J/cm 2 for DURA and TENERA species respectively at a temperature of 26°C. It is clear that DURA PKS are more resistant to breakage. This resistance is directly linked to the highest density, compactness and low void index of Dura variety.
