Israel, whose area is comparable to half the area of Moscow oblast, has a wide range of soils, from Terra Rossas in the subhumid northern regions to Regosols on the arid southern plains. This diversity is due to both the present-day differentiation of the climate and the landscape structure of the region and due to evidence of the past, mainly of the Neogene and Quaternary environments.

Soils of Israel | SpringerLink
Eleven chapters present a concise description of the soils of Israel, including their distribution, chemical, physical mineralogical characteristics and agricultural attributes. On the background of the various soil-forming factors such as climate, lithology and physiography the pathways of their formation is discussed.

The Soils of Israel | NHBS Academic & Professional Books
Agriculture in Israel is a highly developed industry. Israel is a major exporter of fresh produce and a world-leader in agricultural technologies despite the fact that the geography of the country is not naturally conducive to agriculture.More than half of the land area is desert, and the climate and lack of water resources do not favor farming. Only 20% of the land area is naturally arable.
