Centrifugation and electrophoresis. An important tool in biochemical research is the centrifuge, which through rapid spinning imposes high centrifugal forces on suspended particles, or even molecules in solution, and causes separations of such matter on the basis of differences in weight.

Biochemistry - Methods in biochemistry | Britannica

Biochemical studies or Biochemical Techniques rely on the availability of appropriate analytical techniques and their applications. This undergraduate course deals with the different biochemical techniques such as spectrophotometry and chromatography to gain knowledge on the biomolecules such as proteins, lipids, carbohydrates, nucleic acids, and their functions.

Biochemical Techniques: Types, Basic methods Notes

What Biochemists and Biophysicists Do. Biochemists and biophysicists study the chemical and physical principles of living things and of biological processes, such as cell development, growth, heredity, and disease.

What does a Biochemist do?

The term biochemistry is synonymous with two somewhat older terms: physiological chemistry and biological chemistry.Those aspects of biochemistry that deal with the chemistry and function of very large molecules (e.g., proteins and nucleic acids) are often grouped under the term molecular biology.Biochemistry is a young science, having been known under that term only since about 1900.
