What Is Value Engineering In Cost Estimating?

VE is a method used to eliminate any unnecessary costs, in order to achieve value for money on a project. VE methods and techniques can be used throughout the life cycle of a project, from strategic definition (very early

design) to handover and close out. VE is best utilised as a team approach to provide the optimum value on a project.

This means that the whole project team should be involved, from the client right through to the supply chain.
