Abstract. We investigated the atomistic and dynamical mechanism of polaron formation in methylammonium lead iodide perovskite (MAPbI3), which is a representative perovskite solar cell absorber, through the quantum mechanical molecular dynamics simulations. The simulations were conducted on the spatial scale of several nanometres, which can describe charge localization and the associated structural deformation, using the divide-and-conquer-type density-functional tight-binding method, which ...

Quantum-mechanical molecular dynamics simulations of...

Molecular dynamics simulation (MD simulation) had a great advantage in dealing with large molecular systems such as ILs, especially without considering the electronic structure . Yan et al. [28] carried out MD simulation of the electronic polarization model of ILs, and the simulation results have a good correlation with the experimental results.

Quantum-chemical calculation; molecular dynamics...

Molecular dynamics simulations were used to probe the mechanisms of viral assembly. The entire STMV particle consists of 60 identical copies of one protein that make up the viral capsid (coating), and a 1063 nucleotide single stranded RNA genome. One key finding is that the capsid is very unstable when there is no RNA inside.

Molecular dynamics – Wikipedia

During the last few decades, to support experimental observations and measurements, quantum/mechanical molecular dynamics (QMMD) simulations with reasonable accuracy and efficiency have significantly unraveled structural, energetic, and dynamical properties of excess proton in aqueous environments.

Recent advances in quantum/mechanical molecular dynamics...

Quantum Molecular Dynamics Simulations MAGICS Workshop November 12, 2018, Washington, DC Aichiro Nakano Collaboratorfor Advanced Computing & Simulations Depts. of Computer Science, Physics & Astronomy, Chemical Engineering & Materials Science, and Biological Sciences University of Southern California Email: anakano@usc.edu QXMD tutorial:

Quantum Molecular Dynamics Simulations – MAGICS

The computational technique known as molecular dynamics can simulate millions of atoms at a time but does not capture quantum-mechanical interactions between electrons. Today chemists and materials scientists can run molecular dynamics simulations of millions of atoms, though without an explicit representation of individual electrons.

Physics – Waiting for the Quantum Simulation Revolution

We have implemented a quantum molecular dynamics simulation incorporating nonadiabatic electronic transitions on massively parallel computers to study photoexcitation dynamics of electrons and ions. The nonadiabatic quantum molecular dynamics (NAQMD) simulation is based on Casida's linear response time-dependent density functional theory to describe electronic excited states and Tully's fewest-switches surface hopping approach to describe nonadiabatic electron-ion dynamics.

Large nonadiabatic quantum molecular dynamics simulations...

Molecular Dynamics: Basics Diffusion in Liquids from Molecular Dynamics Simulations The first step is to optimise the geometry to remove any large forces from the starting configuration. Large initial forces can cause integration problems in the following molecular dynamics calculations.

Viscosity in liquids from molecular dynamics simulations...

Molecular dynamics and its relation to other methods of computer simulation Computer simulations in condensed matter physics aim to calculate structure and dynamics from atomistic input [1–4]. The theoretical basis of this approach is statistical thermodynamics.

Molecular dynamics simulations – IOPscience

The European Training Network (ETN) “MOQS – Molecular Quantum Simulations” provides an international, interdisciplinary and intersectoral doctoral training of 15 PhD candidates (‘early-stage researchers’). The consortium brings together the expertise to prepare the candidates in the multiple disciplines required for the emerging field of quantum simulations of molecular structure and ...

Europe – 15 positions in the field of quantum simulations...

Quantum simulation of quantum chemistry is one of the most compelling applications of quantum computing. It is of particular importance in areas ranging from materials science, biochemistry, and...

Molecular dynamics | QuantumATK R-2020.09 Documentation

ABSTRACT. In this paper, we explore in detail the way in which quantum decoherence is treated in different mixed quantum/classical molecular dynamics algorithms. The quantum decoherence time proves to be a key ingredient in the production of accurate nonadiabatic dynamics from computer simulations. Based on a short time expansion to a semiclassical golden rule expression due to Neria and Nitzan [J. Chem. Phys. 99, 1109 (1993)], we develop a new computationally efficient method for ...

Quantum decoherence and the isotope effect in condensed...

Since the 'rst work of Fermi, Pasta, and Ulam in 1955, molecular dynamics (MD) simulation has frequently been used to investigate and predict the properties of condensedmatter.Foracrystal,thesecalculationsarevalid in the classical limit, i.e., for temperatures higher than the Debyetemperature.Forexample,inthecaseofaharmonic interatomic potential, the calculated heat capacity is con- stant at all temperatures and equals the limit value of Dulong and Petit (1819).

Quantum thermal bath for molecular dynamics simulation

Abstract A combined quantum mechanical (QM) and molecular mechanical (MM) potential has been developed for the study of reactions in condensed phases. For the quantum mechanical calculations semiempirical methods of the MNDO and AM1 type are used, while the molecular mechanics part is treated with the CHARMM force field.

A combined quantum-mechanical and molecular-mechanical...

Here, quantum-classical molecular dynamics (MD) and free energy methods are used to disclose the two-metal-dependent mechanism of phosphodiester bond cleavage in CRISPR-Cas9. Ab initio MD reveals a conformational rearrangement of the Mg 2+ -bound RuvC active site, which entails the relocation of H983 to act as a general base.

Catalytic Mechanism of Non-Target DNA Cleavage in CRISPR...

This project is focused on the methods which avoid exponential curse of quantum dynamics. The ambition of the project is to create quantum analog of classical molecular dynamics capable of solving the time-dependent Schrödinger Equation for systems comprised of large number of quantum particles.
